

1 **ABSTRACT OF THE DISCLOSURE**

2 A hinge includes a bracket, two fixing seats pivotally connected to the bracket,
3 at least one base, at least one first arm pivotally connected between the at least one base
4 and the at least one fixing seat and at least one second arm pivotally connected between
5 the at least one base and the at least one fixing seat. At least one spring is provided
6 between the at least one second arm and the at least one base such that when both the at
7 least one first and second arms are pivoted relative to the at least one base, the required
8 recovery force is provided to facilitate the upward movement of the bracket relative to
9 the at least one base.
